| Priority and status of science                                        | • How would you describe the status and priority of science within your school/college?  
• Is science practical work supported?  
• Do you consider practical work an important contribution to the status of science?  
• What would be your priority if you could increase the budget?                                                                                                                          | School leadership support for science – evidence either way  
Value of examination results on status / priority  
Pupil premium funds allocated to science  
Budget sufficient for all planned practical work  
Technical support level maintained  
All departments (biology, chemistry, physics, any others, e.g. electronics) give practical work similar status  
Students valuing practical work                                                                                                         | Some details could be obtained from documents  
Ask why                                                                                                                                                                                                                  |
| Priority and status of practical work within science                  |                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                          |
| Importance of practical work in science                               | Why is practical work important/ not important in science?                                                                                                                                                                                                                                                                                    | Trains students’ scientific method / investigation / inquiry / skills  
Authentic experience of “being a scientist”  
Learning vs not learning science concepts  
For examination requirements only  
Expensive but worthwhile vs Too expensive for little outcome  
Varying importance across Key Stages                                                                                                                                                                                       | See continuum below “Importance of practical work”, ask the group to decide where the Department lies on the continuum                                                                                     |
| 3. | Examples of practical work | Describe a piece of practical work in science that illustrates the most typical / “best” example of your practice. | (If time) probe for an example at each Key Stage
Probe why it’s the “most typical/best” (not just teachers’/technicians’ favourite) | May be hard to get agreement
Ask for worksheet/resource to illustrate |
| 4. | How is practical work in science taught? | What factors influence how practical work teaching is organised and delivered?
Changes for next year: If any, what are these and why are they happening? | Ability groups:
e.g. high ability gets more / less practical work vs low ability gets more /less practical work
Key Stages: KS3 lots of practical work vs KS4 / 5 less practical work
Subjects: Variations between biology / chemistry / physics / other
Teachers: All have confidence and knowledge for all practical activities vs needing support – how is this provided?
Context: student behaviour / time of day / room available / amount of lesson time / technical support | Try to get an overview of practices in the school/college |
| 5. | Ethos for practical work in science | What ethos drives the experiments / practical activities your students do?
Changes for next year: If any, what are these and why are they happening? | Fixed instructions vs open-ended
What is their position?
Experiments needed for examinations vs all practical work has purpose
How do students record practical work – formal written report / informal discussion?
What happens if a student has an idea for a new experiment?
What happens if a teacher / technician has an idea for a new experiment? | See continuum “Ethos for practical work” below, ask the group to decide where the department lies on the continuum |

</tr>
</tbody>
</table>
Ethos for practical work

Students carry out most experiments by following instructions to arrive at predetermined outcomes.

Students carry out most experiments as open-ended inquiries or investigations.
Importance of practical work

To ensure students get good/excellent grades in qualifications.

To learn science creatively, “becoming a scientist”.

Durham University
### 3 School Staff Focus Group and Telephone Interview questions – Year 2

**General comments:**
- The aim of the focus groups in year 2 is to focus on changes from last year
- Wherever possible, please relate the discussions you have to the year 2 survey responses from the school

<table>

3. **Budget for science**
- Has your budget for science changed?
- Have your priorities for spending your budget changed in the last year? If so, how?
- What would be your priority if you could increase the budget?
- How is the budget distributed across the sciences?

4. **Examples of practical work**
- Describe a piece of practical work in science that illustrates the most typical / “best” example of your practice.
- Do you have any examples of practical work that occur outside the laboratory?
- If so, what are these?

5. **How is practical work in science taught?**
- What factors influence how practical work teaching is organised and delivered?
- Have any changes occurred at any key stage since last year? Please explain.
- Are all sciences treated equally?
- Has the school previously followed any very prescribed curricula for practical work (e.g. Salters A level etc)? Are they

---

**For examination requirements only**
Expensive but worthwhile vs Too expensive for little outcome
Varying importance across Key Stages

**Department lies on the continuum**

**Reasons needed for any changes**
Explore priorities – last year v this year
i.e. what would departments like to do vs what they actually can do with their funds?

Note these questions should pick up differences between school types

(IF time) probe for an example at each Key Stage
Probe why it’s the “most typical/best” (not just teachers’ / technicians’ favourite)
Explore by subject (e.g. “just” biology fieldwork, or university/employer visits for all sciences)
Explore by age group
Explore by visitor to department/school

May be hard to get agreement
Ask for worksheet / resource to illustrate

Try to get an overview of practices in the school/ college
|   | continuing using these even though the curriculum has changed? | Key Stages: KS3 lots of practical work vs KS4 / 5 less practical work  
Are independent projects or independent practical work carried out? Can they give examples?  
Are extended projects or practical work carried out, if so, what form does it take?  
Is more independent and/or project/problem based learning carried out at KS3 than KS4 / 5? If so, why?  
Has the amount of independent and/or extended project/problem based learning changed since last year?  
Subjects: Variations between biology / chemistry / physics / other  
Teachers: All have confidence and knowledge for all practical activities vs needing support – how is this provided?  
Context: Student behaviour / time of day / room available / amount of lesson time / technical support  
Explore if this is just examination specification related, and/or other objectives – if so what are these? Connections to teaching specific topics/ experiments etc. |   |

Ethos for practical work

Students carry out most experiments by following instructions to arrive at pre-determined outcomes.

Students carry out most experiments as open-ended inquiries or investigations.
Importance of practical work

To ensure students get good/excellent grades in qualifications.

To learn science creatively, “becoming a scientist”.
## School Staff Focus Group and Telephone Interview questions – Year 3

### General comments:
- The aim of the focus groups in year 3 is to **focus on changes** from last year
- Wherever possible, please relate the discussions you have to the year 3 survey responses from the school

<table>
<thead>
<tr>
<th>Topic</th>
<th>Suggested questions</th>
<th>Probe for</th>
<th>Comments</th>
</tr>
</thead>
</table>
| 1. Priority and status of science                                    | • How would you describe the status and priority of science within your school/college?  
  • Has this changed in the last year? If so, how?  
  • Is science practical work supported?  
  • Do you consider practical work an important contribution to the status of science? | School leadership support for science – evidence either way  
  Value of examination results on status / priority  
  Explore reasons for changes  
  Budget sufficient for all planned practical work  
  Technical support level maintained  
  All departments (biology, chemistry, physics, any others, e.g. electronics) give practical work similar status  
  Students valuing practical work | Some details could be obtained from documents  
  Ask why |
| 2. Importance of practical work in science                           | • Why is practical work important/ not important in science?  
  • Have your views about the importance of practical work changed in the last twelve months? If so, how? | Trains students’ scientific method / investigation / inquiry / skills  
  Authentic experience of “being a scientist”  
  Learning vs not learning science concepts  
  For examination requirements only  
  Expensive but worthwhile vs Too expensive for little outcome | See continuum below “Importance of practical work”, ask the group to decide where the Department lies on the continuum |
### 3. Budget for science

- Has your budget for science changed in the last twelve months?
- Have your priorities for spending your budget changed in the last year? If so, how?
- What would be your priority if you could increase the budget?
- How is the budget distributed across the sciences?

#### Varying importance across Key Stages

- Reasons needed for any changes
- Pupil premium funds allocated to science
- Explore priorities – last year v this year
  i.e. what would departments like to do vs what they actually can do with their funds?
- Is any one subject / age group favoured over any others? If so which and why? Explore perceptions of colleagues
- Have they felt that they have had to buy enough equipment so that all classes can do experiments simultaneously (e.g. for GCSE ‘required’ practicals), or can they make arrangements so that they can do with fewer sets of equipment?
- Do they see the current level of expenditure as something that will change?

#### If AS/A2 are offered

Please explore these for post-16

Note these questions should pick up differences between school types

### 4. Practical work “in practice”

- Has the practical work you carry out changed in the last twelve months? If so, why?
- Has the quality of the practical work changed?

#### What is included now / dropped from previous years?

- Is the amount of practical work the same/ more / less than previously?
- Explain any changes – explore possible “barriers”, e.g. extra content, resourcing, staffing changes
  i.e. in terms of “quality of student experience”

STEM clubs are of particular interest. Is the practical work in STEM clubs etc. different from lessons and if so, why?

#### Please explore for GCSE in all schools and AS and A2 where offered
| 5. **How is practical work in science taught?** | • Do you have any examples of **practical work** that occur outside the laboratory?  
• If so, what are these?  
• How are staff teaching GCSE/AS/A2 interpreting ‘required’/‘core’ practicals? | Are students undertaking “hands on” practical work for all ‘required’ GCSE/AS/A2 practical activities? Are some taught purely as theory? Do staff think that to pass written exams that students need to have done ALL the ‘required’ practicals? Are they teaching the practicals in any particular order? Do all classes do the practicals at the same time? |
| | | Try to get an overview of practices in the school/college |
| | • What factors influence how practical work teaching is organised and delivered?  
• Have any changes occurred at any key stage since last year? Please explain.  
• Has the school previously followed any very prescribed curricula for practical work (e.g. Salters A level etc.)? Are they continuing to use these even though the curriculum has changed? | With the recent changes at GCSE, is practical work given the same amount of time as previously? Are there differences in practical work time given to different ability groups? Can they give examples of differences?  
Explore reasons for changes  
Does lesson duration make a difference to the type of practical science that is carried out?  
Key Stages: KS3 lots of practical work vs KS4/5 less practical work  
Is open-ended practical work carried out? Has this changed in the last twelve months? Can they give examples?  
Is extended practical work (more than 2 weeks of lesson time in duration) carried out, if so, what form does it take?  
Is more open-ended and/or project/problem based learning carried out at KS3 than KS4/5? If so, why?  
Has the amount of open-ended and/or extended project/problem based learning changed since last year?  
Subjects: Variations between biology / chemistry / physics / other |
<table>

Teachers: All have confidence and knowledge for all practical activities vs needing support – how is this provided?

What in-house /external professional development relating to practical work is / has been provided?
What opportunities (i.e. informal professional development) for sharing expertise are provided/ occur?

Context: Student behaviour / time of day / room available / amount of lesson time / technical support

Try to find out where CPD comes from and how staff establish best practice.

Explore if practical work is regarded as examination specification related only. If not what other objectives are there for doing it? Connections to teaching specific topics/ experiments etc.

Fixed instructions vs open-ended What is their position?

Experiments needed for examinations vs all practical work has purpose

Explore reasons for changes

How do students record practical work– formal written report / informal discussion?

What happens if a student has an idea for a new experiment?

What happens if a teacher / technician has an idea for a new experiment?

Extent of shared opinion on this topic?

See continuum “Ethos for practical work” below, ask the group to decide where the department lies on the continuum
