Health Risks and Health Inequalities in Housing: an Assessment Tool

This tool is designed to assess the health risks of housing and the residential environment at the scale of a neighbourhood, housing stock or administrative area. For each health risk, the tool enables a judgement to be recorded about the level of health risk attributable to unhealthy or unsafe housing conditions, and for this to be compared with the adequacy of local practice in mitigating the risk.

Prepared for the Housing Learning & Improvement Network by Professor Tim Blackman, University of Durham

Annex: Practitioners Checklist
Health and housing risk assessment tool

Introduction

This tool was commissioned by the Housing Learning & Improvement Network in the Care Service Improvement Partnership at the Department of Health. It is part of a programme of work on Investing in Healthy Neighbourhoods. The Housing LIN brings together lead commissioners and other stakeholders from social services, primary care and the acute sector to develop whole system solutions to the housing, care and support needs of older and vulnerable people.

The tool provides housing and health professionals with a method for assessing at a strategic level the contribution of housing and neighbourhood improvements to tackling health problems. It has been developed by Tim Blackman, Professor of Sociology and Social Policy in the School of Applied Social Sciences at Durham University, and a Neighbourhood Renewal Advisor with the Office of the Deputy Prime Minister. Comments on the tool and how it could be further improved are welcome (email tim.blackman@dur.ac.uk).

A background briefing on housing and health

The Government’s White Paper Choosing Health\(^1\) sets out a programme of action that prioritises communities with the worst health and deprivation. The delivery plan\(^2\) requires PCTs, local councils and other partners to work together to achieve cross-cutting targets to narrow health inequalities and improve the conditions that lead to ill-health.

Housing is one of the wider determinants of health, and poor housing conditions can lead to a wide range of physical and mental health problems. The Choosing Health delivery plan identifies housing’s contribution to its delivery targets as bringing all social housing up to the new ‘decent homes’ standard\(^3\) by 2010, reducing the amount of non-decent housing in the private sector, eliminating fuel poverty among vulnerable households by 2010, and improving neighbourhood liveability.

Both within and beyond these target areas housing action can achieve health gains. This tool offers a method of identifying these actions at a local strategic level using evidence-based risk assessment.

The significance of housing in pathways to better health is recognised in the National Service Frameworks, the NHS strategies for improving specific areas of care. Health and other services need to be joined up with housing to achieve integrated care and rehabilitation for people with severe and enduring mental health problems and older people with care needs\(^4\). The adult care Green Paper Independence, Well-being and Choice identifies a key role for housing in future developments, including single assessments of need, smart homes and extra care housing. Housing and homelessness services are also integral to the partnership approach set out in the NSF for children and young people\(^5\).

The policy frameworks for Supporting People\(^6\) and Older People's Strategies\(^7\) encompass a range of user groups that require supported housing to be jointly planned and delivered across the boundaries that separate the NHS, local government, housing providers and other partners. As well as older people with support needs and vulnerable young people such as care leavers and teenage parents, these groups include people with mental health problems, people with disabilities, women at risk of domestic violence, homeless households, people with alcohol or drug problems, people with HIV/Aids, offenders or people at risk of offending, refugees, and black and minority ethnic people with particular cultural, language or family needs, or who face harassment.

These groups are at a higher risk of experiencing hazardous housing conditions or homelessness without either short-term or long-term support with obtaining a decent home and living as independently as possible. Failing to provide this support can cause or exacerbate health problems that become more difficult and costly to treat downstream. Housing is an upstream intervention, not just for particular vulnerable groups but across the whole population. Some studies have indicated that significant savings in health care expenditure can be achieved by improving housing conditions\(^8\).
How to use this tool

Health and housing practitioners can use this tool to make a rapid strategic assessment of the health risks of residential environments at the scale of a neighbourhood, housing stock or administrative area. Health risks are listed alphabetically, followed by a brief analysis of how housing or neighbourhood conditions contribute to the risk and a series of good practice points about how to mitigate the risk with housing or neighbourhood measures. The tool includes two checklists. The first is completed by assessing, for each health risk, the extent of housing and neighbourhood conditions known to be associated with the risk, using a five-point scale. The second is completed by assessing how well developed local policy and practice is with regard to minimising the risk to health from these conditions. A column for noting action points is included.

The tool complements the Housing Health & Safety Rating System (HHWR) used by local authorities and housing organisations to assess hazards in individual dwellings, but is wider in scope and aimed at informing strategic priorities based on judgements about conditions across whole neighbourhoods and areas. The checklists are best completed by a small team familiar with the local context. The ratings of risk severity and adequacy of policy and practice enable an overview to be compiled. Ratings can be entered into an Excel spreadsheet and graphed to show the 'performance gap' between the extent of risk and the extent of good practice. Larger performance gaps point to where action should be prioritised - there is an example in the Appendix. The tool includes a bibliography linked to each health risk by endnotes, and further information about policy and practice development can be found by searching web-based sources using key words from the 'good practice points'. Some useful sources are:

- The Neighbourhood Renewal Unit’s guide to ‘what works’ at <http://www.renewal.net/>.
- The Chartered Institute of Housing’s Good Practice Unit at <http://www.cih.org/gpu/>.

<tr>
<td><strong>Home accidents</strong> caused by environmental hazards are most common among older people and very young children, especially in low income households. Most fatal falls are on stairs/steps among people aged 75 plus. Burns, scalds, falls and swallowing objects or poisons are the main risks for young children.</td>
<td>1. There are home accident and fire prevention strategies based on monitoring accident data and assessing risk.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>2. There is a well-advertised home accident prevention programme, including services provided by home improvement agencies and handy-person schemes, offering handrails, bathroom and kitchen adaptations, safety gates, window catches, etc., available to all older people assessed as at risk and all economically disadvantaged families with very young children.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>3. There is a well-advertised programme for fitting smoke detectors, preferably mains-operated or ten-year battery operated. There is a target of 100% coverage among vulnerable groups and flats in all tenures.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>4. There are systems and resources in place for undertaking or enforcing action to remedy defects likely to be a hazard to health, such as dangerous stairs, electrics, plumbing, lighting, etc.</td>
<td></td>
<td></td>
<td></td>
<td></td>

### Health and Housing Risk Assessment Tool

#### Health Risk: High rise flats

- **Good Practice Points:**
  1. High rise allocations to women with children are avoided.
  2. Women and children in high rise flats receive priority for transfers.

#### Health Risk: Homelessness

- **Good Practice Points:**
  1. Homeless households are normally rehoused rapidly in permanent accommodation.
  2. There are dedicated healthcare services for homeless people, with access to social support.
  3. There is an integrated approach to homelessness, mental health and drug and alcohol problems.

</tbody>
</table>
### Information and consultation

Information and consultation if poorly handled can cause uncertainty and feelings of powerlessness, especially when potentially disruptive housing improvements are being undertaken, and this has been linked with heightened stress and anxiety\(^23\)\(^24\).

1. There is generally good communication with residents and tenants about changes affecting their homes and neighbourhoods, including agreed compacts about how they will be involved in decisions.
2. There is positive encouragement for tenants and residents associations and they are part of an overall consultation structure.
3. There are special measures such as development officers to involve hard-to-reach groups such as older people when changes are proposed.
4. Improvement works are generally well-managed to minimise disruption for local residents.

### Noise

Noise such as aircraft, heavy traffic or noisy neighbours can act as a stressor at night by disturbing sleep and during the day by causing serious annoyance\(^25\).

1. Services respond rapidly and effectively to noise nuisance.
2. The housing stock is not exposed to stressful levels of environmental noise and has adequate noise insulation.

</table>
### Overcrowding

Overcrowding is linked with emotional problems, social tension and irritability. Black and minority ethnic families are particularly affected by shortages of larger homes.

1. There is a reasonable match between housing supply and housing needs.
2. The social housing stock is effectively managed to minimise overcrowding.
3. Overcrowding is defined using the bedroom standard.\(^{27}\)

### Social Deprivation

Social deprivation concentrated in estates and neighbourhoods with an absence of any better-off households, residential instability and low demand in unpopular housing areas are associated with depressed mental health and other health problems among adults and children.\(^{28, 29}\)

1. Social landlords use local lettings policies aimed at creating balanced, sustainable communities. Lettings practices that concentrate disadvantage geographically are avoided.
2. There are arrangements for private landlord accreditation that promote good practice.
3. There is a mixed tenure strategy for new development, redevelopment and in-fill developments.
4. Housing market renewal and regeneration are used to create sustainable mixed income communities in consultation with local residents.
### ASSESSMENT OF CURRENT POSITION

#### HEALTH RISK

#### Homelessness

- **Analysis**: Homelessness is associated with very high rates of smoking. \(^{30}\)

- **Good Practice Points**
  1. Homeless households are normally rehoused rapidly in permanent accommodation.
  2. There are dedicated healthcare services for homeless people, with access to social support.

#### Neighbourhood problems

- **Analysis**: Neighbourhood problems may increase smoking prevalence due to psychological distress caused by burglary, harassment, anti-social behaviour or neighbourhood environmental problems such as vandalised property or serious littering. \(^{31}\)

- **Good Practice Points**
  1. Neighbourhood problems are identified and responded to quickly.
  2. Neighbourhood management and wardens are targeted where there are problems.
  3. There is coordination or integration of environmental services at neighbourhood level.

- **Extent of Problem**
  - Very common

  - Needs a lot of development
  - Don’t know

- **Action Points**

#### Radon exposure

- **Analysis**: Radon exposure inside the home is an appreciable risk factor for lung cancer, especially among smokers and in rural areas. \(^{32}\)

- **Good Practice Points**
  1. Properties and residential land affected by radon have been identified.
  2. Locations significantly affected by hazardous concentrations of radon have received appropriate action such as increasing underfloor ventilation with airbricks and installing extractor fans and radon proof barriers at the ground level of new buildings.

## EVIDENCE AND STAFF DEVELOPMENT

### Systematic appraisal of evidence

- **Analysis:**
  - Systematic appraisal of evidence is a basis for effective and accountable decision-making.
- **Good Practice Points:**
  1. Policy makers, managers and practitioners have available to them information on research and best practice.
  2. Decisions are demonstrably rooted in evidence from research and best practice.
  3. Decision-makers have the skills to locate, appraise and apply evidence.
  4. Residents and tenants are involved in participatory research projects.
  5. Evidence is shared with the public to account for decisions.

## HEALTH CARE COSTS

### Partnership working

- **Analysis:**
  - Partnership working can generate solutions that single agencies cannot solve and make better use of existing resources to improve health.
- **Good Practice Points:**
  1. There are well-led and effective partnerships between housing and health agencies and professionals.
  2. Housing, care and community equipment services are integrated.
  3. There is a shared understanding of housing, care and support needs and provision.

---|---|---|---|---|---
**HEALTH CARE COSTS** | **Policies** that focus housing action on health improvement can achieve health gains and release health care resources. Home adaptations and assistive technology can substitute for or supplement formal care services; costs are likely to be recouped through subsequently lower care costs.

1. Housing need assessments include evidence of the impacts of housing on health, with the results reflected in policy and practice decisions.
2. Policy linkages between housing and health at a strategic level are achieved through the Local Strategic Partnership.
3. Health impact assessments are undertaken of strategic housing decisions and schemes.
4. Health equity audits include a comprehensive consideration of the effects of housing on health inequalities.

**ACTION POINTS**

---

**NUTRITION AND OBESITY** | **Exercise** may be discouraged by the environment, increasing risks of obesity, heart disease, cancer and diabetes. Walkable neighbourhoods (including having places to walk to) are associated with higher social capital, better health and less likelihood of residents being overweight.

1. There are local opportunities for safe, active play for children.
2. There are safe and pleasant conditions for walking and cycling, including safe routes to school.
3. Neighbourhoods encourage walking and cycling because there are nearby shops and schools, trees and greenery, low traffic flows and crime rates, and freedom from litter and uncontrolled dogs.

### Homelessness

- **Homelessness**, especially if sleeping rough, is associated with chronic chest problems.\(^{56}\)

1. Homeless households are normally rehoused rapidly in permanent accommodation.
2. There are dedicated healthcare services for homeless people, with access to social support.
3. There is an integrated approach to homelessness, mental health and drug and alcohol problems.

### Overcrowding

- Overcrowding is associated with increased risk of infectious or respiratory diseases.\(^{57}\)

1. There is a reasonable match between housing supply and housing needs.
2. The social housing stock is effectively managed to minimise overcrowding.
3. Overcrowding is defined using the bedroom standard.\(^{58}\)

</tr>
</tbody>
</table>

Ventilation is necessary to keep dust mites below sensitisation thresholds and lower asthma risk.60.

Multiple sealing and insulation can reduce ventilation, increasing risk of eye and nasal complaints, headache and tiredness.61.

Heat-related deaths are far fewer than cold-related deaths, but safe opening of windows and shade need to be considered for older, frail residents.62.
Appendix

This appendix shows on the next page an Excel spreadsheet into which data from a completed risk assessment has been entered. For each health risk and associated housing issue, the rating scale scores for extent and for current policy and practice are shown.

On the following page, there is a radar graph produced from the data for depression and anxiety risks. The red line indicates the ‘extent’ scores, with extent increasing outwards on a scale of 1-5. The blue line indicates assessments of current policy and practice, with this improving outwards on a scale of 1-5. The ‘performance gap’ is largest for environmental problems, neighbourhood problems and concentrated social deprivation, indicating that these issues should be priorities for action.

Actions that would need to be considered in these circumstances would include:

- A more detailed assessment of these problems
- Reviewing evidence about good practice to tackle these problems
- Meeting any professional development or training needs
- Formulation and implementation of joint action plans
- Monitoring and evaluation.

There are widely accepted links between many common health problems and housing conditions.

Some of these health problems can be tackled by referral to a housing service which can help a particular individual. The following chart summarises some of the key health risks, their housing link, possible action and organisations that may be able to help.

There are also more general housing and environmental impacts on health that cannot be addressed on a one to one basis, e.g. high crime, litter, air and noise pollution.

In such cases it would be useful to pass on information about the housing and neighbourhood problems that you are coming across to your managers and policy officers. They can then work with housing providers and others to bring about local environmental improvements.

To assist with such planning ‘Health Risks and Health Inequalities in Housing: an Assessment Tool’ is available from the Housing Learning & Improvement Network at www.changeagentteam.org.uk/housing

This information is produced by housing charity, Care & Repair England for the Department of Health’s Housing Learning & Improvement Network.

**Finding out more**

Care & Repair England’s *Healthy Homes, Healthier Lives* programme aims to raise awareness of the ways in which poor or unsuitable housing can have a negative affect upon people’s health and well-being and to encourage referral to housing related services that can improve living conditions. It offers freely downloadable resources including:

- a *Training Kit* for use in a range of practice settings;
- a *Healthy Homes, Healthier Lives* Self-training workbook

Available from [www.careandrepair-england.org.uk](http://www.careandrepair-england.org.uk) click on ‘Healthy Homes’.

For more information contact Vicki Jellings, at Care & Repair England Tel: 0117 924 9046 (direct) or 0115 950 6500 (head office) Email: [Vicki.jellings@freenetname.co.uk](mailto:Vicki.jellings@freenetname.co.uk)
A-Z of who can help

AC  Age Concern England
    National information and fact sheets Tel 0800 009966 www.ageconcern.org.uk . Local
groups may offer financial advice and practical help (eg. odd jobs & gardening)

CAB  Citizens Advice Bureaux
    Local offices provide information and advice on all topic, including welfare benefits and
housing. To find your nearest branch ring 020 7833 2181. www.citizensadvice.org.uk

DLC  Disabled Living Centres
    At some local centres disabled people can see and try out equipment that helps them to
live independently and trained staff can give impartial information and advice. To find
nearest centre Tel: 0161 834 1044   www.dlcc.org.uk

EAC  Elderly Accommodation Counsel
    Provide information and advice about housing options for older people. 020 7820 1343
www.housingcare.org

HAC  Housing Advice Centres
    Local HACs can give advice about most housing matters but most often deal with
landlord and tenant problems, homelessness and re-housing.

HIA  Home Improvement Agencies
    These are the main source of housing help for owner occupiers. Often know as Care &
Repair or Staying Put, these local services help older and disabled people with home
repairs and adaptations. Many run small repair, adaptation, security, safety and falls
check schemes. To find your local HIA Tel: 01457 891 909 www.foundations.uk.com

LA  Local Authority
    Responsible for repair and adaptation of council housing. Environmental health dept.
administers grants for adaptations and may help owner occupiers with repairs.

LL  Landlords
    The way that you can help people with their housing problem will usually be different for
tenants and owner occupiers. The landlord, often the local authority or a housing
association, is responsible for maintenance of most aspects of the properties that they
rent out and will usually be the first organisation to contact about disrepair.

PCT  Primary Care Trusts
    May be the providers, or more often the commissioners, of falls prevention services.
Also have wider public health responsibilities.

RoSPA  Royal Society for the Prevention of Accidents
    Provide information and advice about all aspects of safety www.rospa.org.uk

SS  Social Services
    Social Services occupational therapists are usually the main route to obtaining help
with, advice about and grants for adaptations.

WF  Warm Front
    This is a national, government funded grant scheme offering grants for insulation and
central heating installation. Tel 0800 072 0150   www.eaga.co.uk
