## Use policy

---

The full-text may be used and/or reproduced, and given to third parties in any format or medium, without prior permission or charge, for personal research or study, educational, or not-for-profit purposes provided that:

- a full bibliographic reference is made to the original source
- a [link](#) is made to the metadata record in DRO
- the full-text is not changed in any way

The full-text must not be sold in any format or medium without the formal permission of the copyright holders.

Please consult the [full DRO policy](#) for further details.

CORRECTION

# Correction: Four-Year-Olds Use a Mixture of Spatial Reference Frames

James Negen, Marko Nardini

[Fig 4](#) incorrectly appears as a duplicate of Fig S5. The authors have provided a correct version of [Fig 4](#) here.

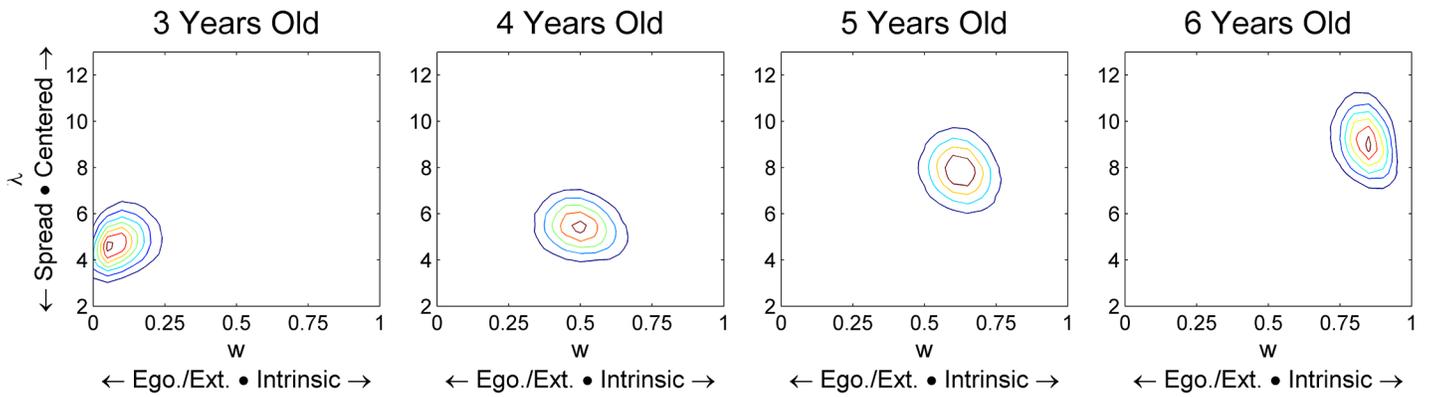

## OPEN ACCESS

**Fig 4. Parameter estimates from the Cue Mixing model at each age.** This model has a separate parameter for the frame of reference being chosen (x axis) and the concentration of responses around the place indicated by that frame (y axis). Both are seen to improve with age here.
